### Green Story

Visually stunning images of flowers and wildlife decorate the walls of Riverworks Printing's production studio in Greenland, NH. Printed on eco-friendly Photo Tex material, these are no ordinary posters. They're biodegradable, more durable than poster paper, and function something like a giant size sticker that can be stuck and re-stuck onto most surfaces time and time again without losing adhesiveness or leaving behind residue.

That's just one example of how Riverworks Printing founder Jeff Cutter and Print Manager Danis Chamberlin are working to redefine the large format print industry by offering cutting edge products that are both visually appealing and green at affordable prices. In an industry known for waste, Riverworks Printing provides customers with a full suite of eco-friendly options, from biodegradable banners and recyclable posters to banner stands made from bamboo, a rapidly renewing resource.

They also go out of their way to ensure that any waste they do produce doesn't end up in local landfills. Bottles, cardboard, food containers, ink and ink cartridges, PVC, and paper – everything that can be recycled gets recycled at Riverworks Printing. With the help of Poly-Recovery in Portsmouth, they're pushing the envelope on what kinds of materials are considered recyclable within the large format print industry. Plus, Jeff and Danis donate leftover materials to schools for art projects.
